

For respiratory symptoms, know where to go.

Primary Care

- Low-grade fever
- Dry cough
- Headache
- Sore throat
- Mild aches and pains
- Diarrhea and other stomach problems
- Exposure to known ill contact

Emergency Department

- Difficulty breathing
- Persistent pain or pressure in the chest
- Blue coloring in the face or lips
- Confusion or sudden change in mental status
- Inability to wake up or stay awake
- Fever for five days or longer (temperature of 100.4 or above)
- Any fever for a child less than 2 months old

If your child is experiencing non-life threatening symptoms and you can't get into your primary care office or it's after hours, please visit an Urgent Care Center.
